

# EARTHMOVERS & MATERIAL HANDLING

## CABLE SHEAVES

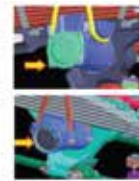

Manufactured from high-performance polymer to reduce wire rope stress, these sheaves are up to 1/7th the weight of steel, self-lubricating, and completely maintenance-free ideal for lifting assemblies.

## BOGIE SUSPENSION BUSHES

Fitted between suspension components to absorb shock and vibration while allowing controlled articulation. Polymer damps cyclic loading without the metal fatigue and wear that a rigid metal bush would suffer over time.

TRUCK BUSHES

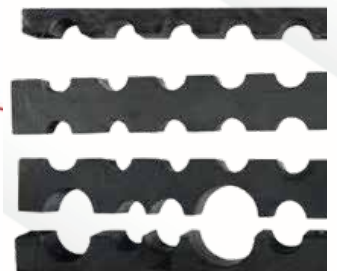

## LEG ADJUSTER PADS / BUSHES / WASHERS

Provide excellent chemical resistance, a blended solid lubricant system, and significant pressure-velocity capabilities. Ideal for stabilisers and support legs exposed to continuous movement and harsh environments.

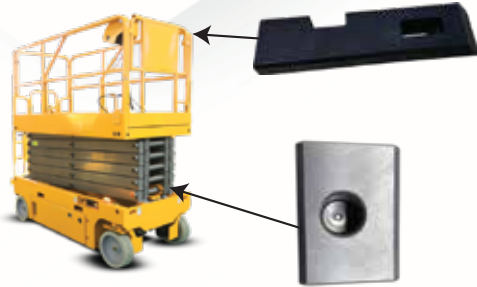

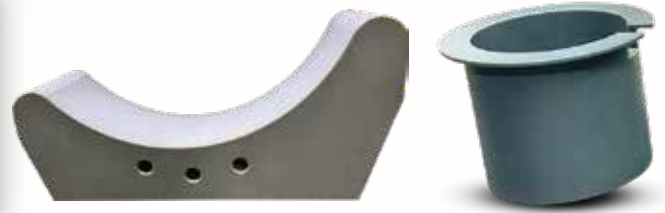

## HYDRAULIC HOSE CLAMPS

Designed to secure and protect hydraulic lines in harsh, high-pressure environments; resistant to vibration and mechanical impact. These clamps are engineered for long-term stability, minimising hose wear and misalignment, even under extreme field conditions.

## SLIDERS & BUSHES

Provide high load-bearing capabilities and good dimensional stability, largely free from internal stress; ideal for repetitive linear motion.

## DOOR LOCKS & SLIDING BLOCKS

Offer high load-bearing capabilities, good dimensional stability, and are largely free from internal stress. FDA-compliant grades are also available for sensitive or regulated environments.

## DAMPER

Used in hydraulic and mechanical joints, Surlon's PU dampers offer vibration absorption, shock resistance, and long-term durability. Their elastic design extends the life of connecting components by absorbing repetitive impact and reducing wear.

## OUTRIGGER PADS

Placed under crane/excavator outriggers to spread load and prevent sinking on soft or uneven ground. Polymer resists cracking under repeated point-loading and won't dent or deform like steel plates on rough terrain.

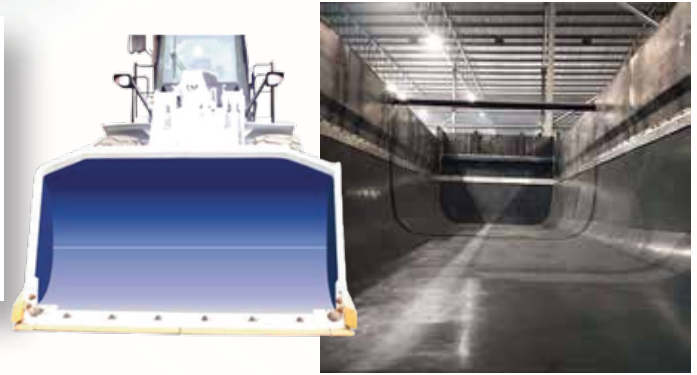

## BOOM ADJUSTERS

Offer precision fit and load-spreading capability, reducing structural stress and extending the service life of boom assemblies and articulations.

## SLIDE TEC LINING SOLUTION

Made with Metalene® 1000 (UHMWPE), these liners deliver non-stick properties, reducing carry-back and build-up. They offer significant weight savings compared to steel or rubber liners, improve tipping efficiency, and eliminate the need for separation or purification.

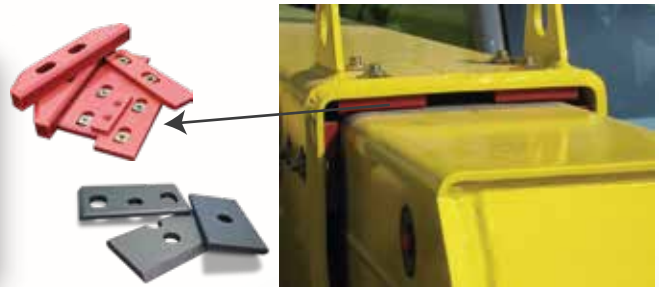

## SCRAPER

Made from high-impact and abrasionresistant materials, scrapers are designed to prevent material build-up on rollers and drums. Their flexible yet durable construction ensures optimal surface contact and noise dampening during operation.

## WEAR PADS

Oil-based self-lubrication with up to 50% lesser & reduced friction and 10× enhanced wear resistance using Surlon's Metalon® Self lubricated grades.
